Introduction

- **Today Education has shifted from traditional learning style to Online. With this sudden shift many group of people encountered some problems.**
- **Online Learning for Hearing-impaired was a major problem.**
- **The Education sector needed a proper solution for hearing-impaired people to continue their learning.**

Research

Implementing a learning environment which can be used by Hearing impaired students as well as tutors.

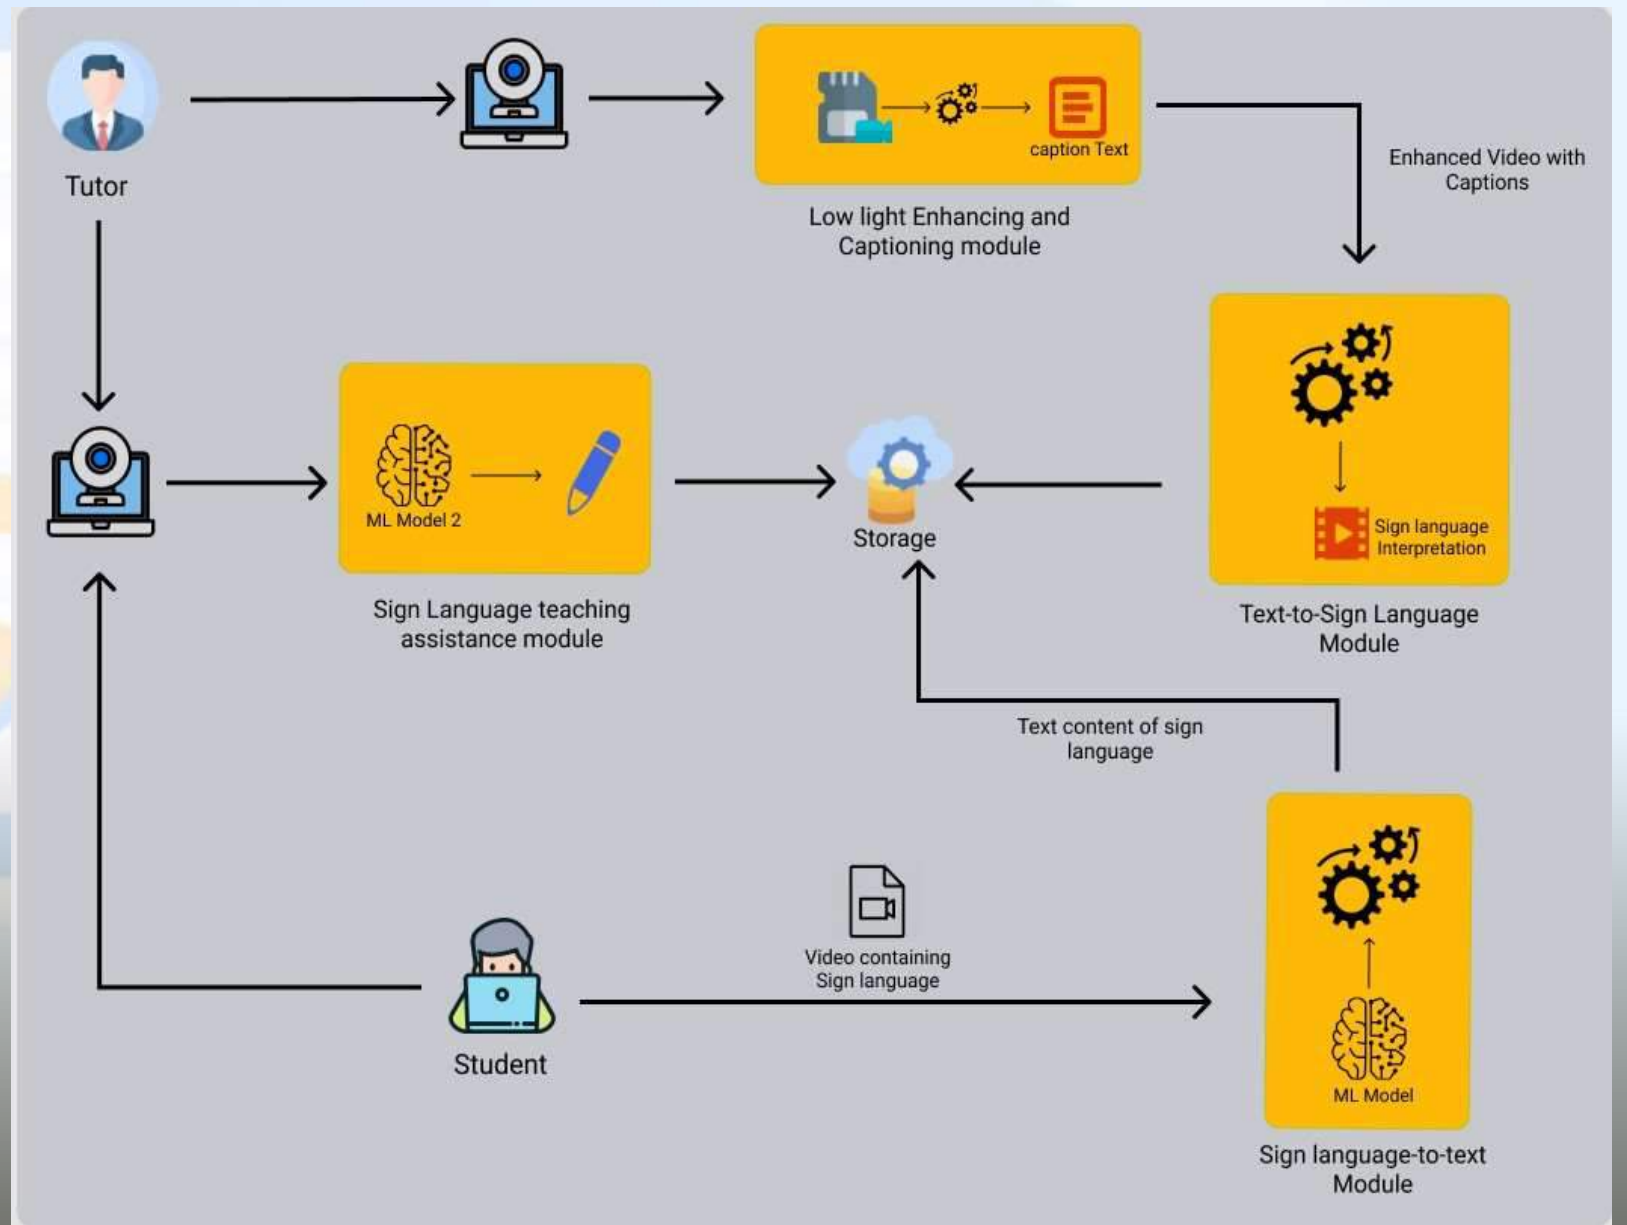

An illustration of a woman in a yellow dress and a man in a blue suit sitting on a large computer monitor. The monitor displays a webpage with the text 'e-learning'. The background is light blue with stylized trees and a pencil holder.

Objective

Objectives

- **Enhancing the low-light videos and providing subtitles or Transcription in real time.**
- **Using the Transcription and generating sign language interpretation.**
- **Students clear doubts using sign language which can be converted into meaningful sentences.**
- **Teaching sign language for general Audience.**

System Overview

Methodology

The proposed LMS is divided into some main components

- **Enhancing uploaded video and producing caption for video content.**
- **Converting the captioned text to sign-language.**
- **Converting the Hearing-impaired student's video to meaningful text.**
- **Detecting user motion and analyzing the sign-language gesture for quiz.**

System Development

Business Potential

Provide as SaaS with one time subscription.

Can monetize the website using advertisements

A Freemium plan.

Future Scope

Can be developed for other sign languages.

Can be developed for omni-platform.

Standards Maintained

Coding Standards Maintained

HCI Standards Maintained

IT18144772 – Niroshan K

**Bachelor of Science (Hons) in Information Technology Specializing in
Software Engineering**

Research

- **Implementing low light algorithm for normal light images result in over exposed bright images.**

- **Sign Language cannot be directly interpreted from sound it needs to be converted to text format[2].**

Research Gap

System	Automated low light enhancement for the uploaded tutor videos	System Generated Captions for the tutor videos
System proposed by W. Farhan and J.Razmak [1]	X	X
System proposed by R.Ranchel, Teresa, Y. Guo and K. Bain [2]	X	X
Our System	✓	✓

Objective

Main Objective

- **Enhance the uploaded video and provide captions or transcripts for them.**

Sub Objective

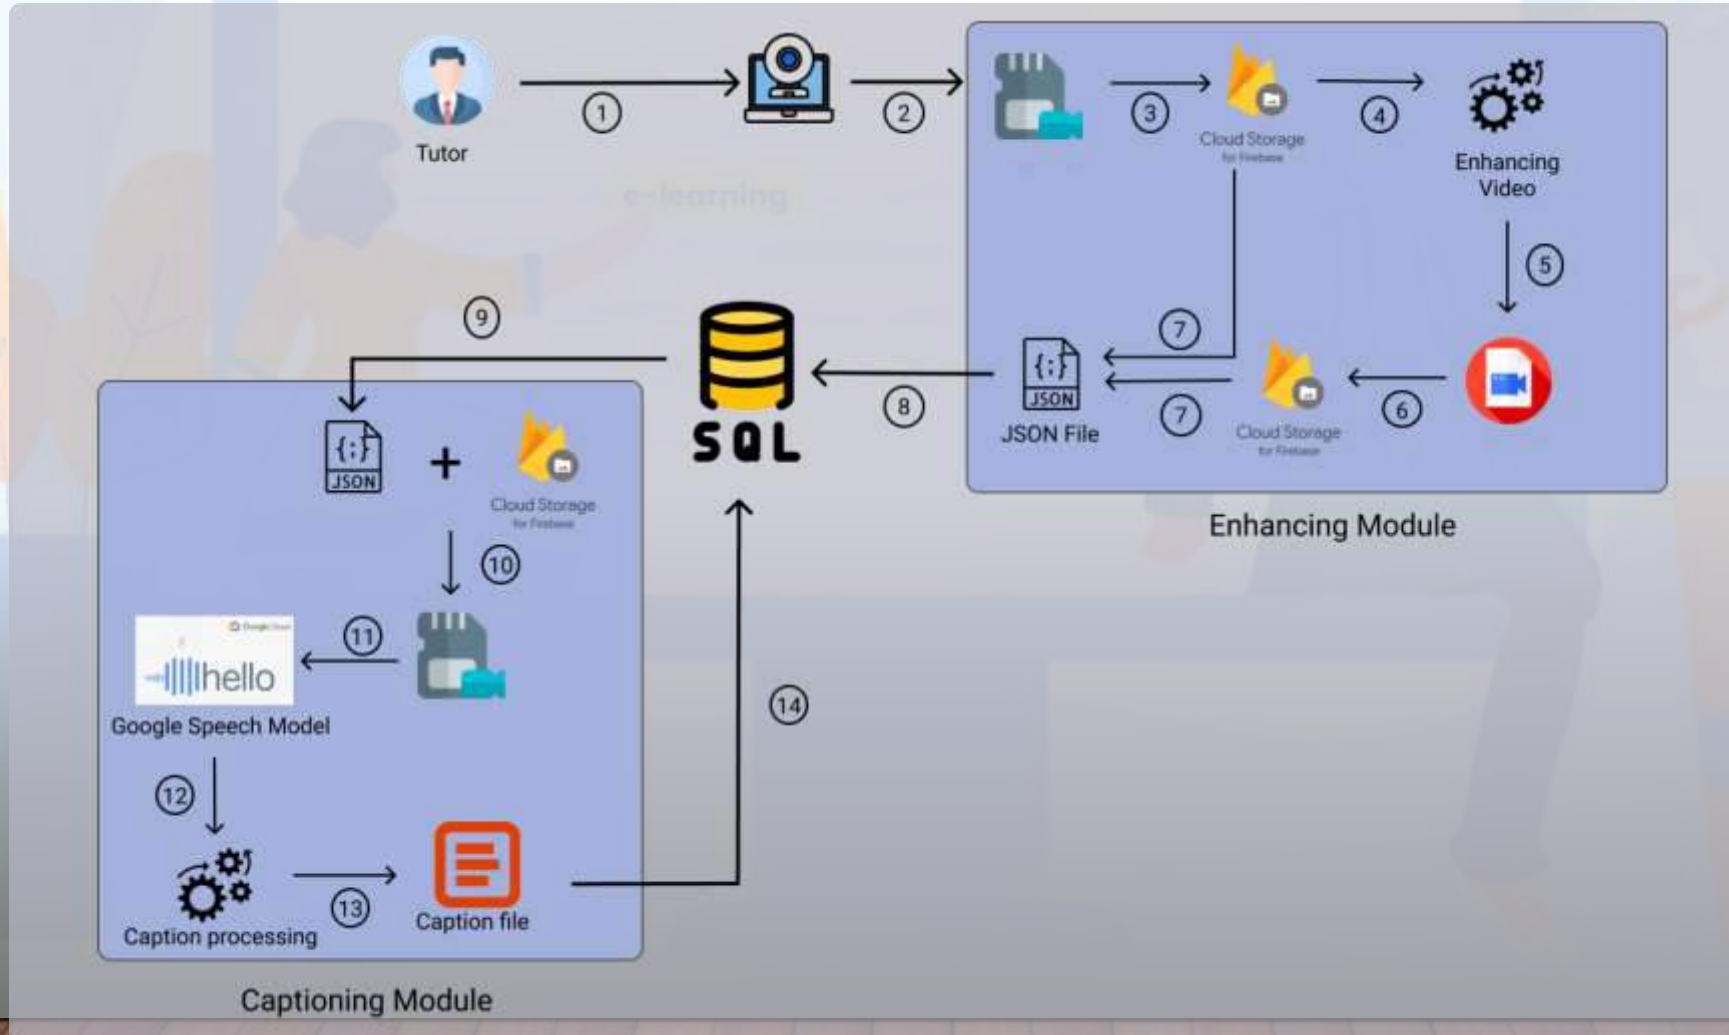

Automated Video Enhancement

- **Use an algorithm to identify low light videos.**
- **Enhance the low light videos and reduce the noise in them**

Automated Captioning

- **Extracting Audio from the video content.**
- **Convert the Speech to Text using Speech-to-Text Model and the generated text as captions to the video**

Methodology

Methodology

- **Construct cumulative intensity histogram for the image or frame of a video.**
- **Identify a threshold to differentiate low-light images and normal light images.**
- **Create an algorithm which can intelligently identify the low light images and normal light images separately.**
- **Use Low light enhancement techniques to improve the intensities of the low-light images and frames.**

Thresholding value to identify low light frames

```
In [126]: threshold = 103
```

Methodology

Enhancement Technique

- Implementing the algorithm to identify low-light images and normal light images.

Methodology

Enhancement Technique

Methodology

Enhancement Technique

- **Enhancing low light images using the Gamma correction technique.**
- **Lookup table created for input and output pixels after gamma correction**

This algorithm is then adopted for Videos.

Methodology

- **For Automated Captioning, Audio is extracted from the video.**
- **Google's Speech-to-Text model will be used to extract the text output of the speech.**
- **Select an accurate timestamp to divide the transcript into individual sentences.**

Methodology

Captioning Technique

- **Audio File is extracted from the video file**
- **Transcription is generated using the Google STT model**
- **Algorithm for transcription to divided into sentences of 6 words using timestamps.**
- **Average time to read a word is taken as 0.5s [4].**

Test Results

Low light enhancement

I used special low-light videos recorded using webcam and images taken from webcam as well as mobiles.

Test Results

Captioning Module

```
----- Extract Audio Start-----  
Moviefy - Writing audio in audio.wav  
Moviefy - Done.  
----- Extract Audio Complete-----  
----- Subtitle Generate Start-----  
number of words: 134  
1  
00:00:00-->00:00:03  
is going to be a long  
2  
00:00:03-->00:00:06  
video which contains all the information  
3  
00:00:06-->00:00:09  
related to the audio fraction now  
4

Thumbnail
Choose File Pop-Art-Landscape-Post.jpg

Category
Art

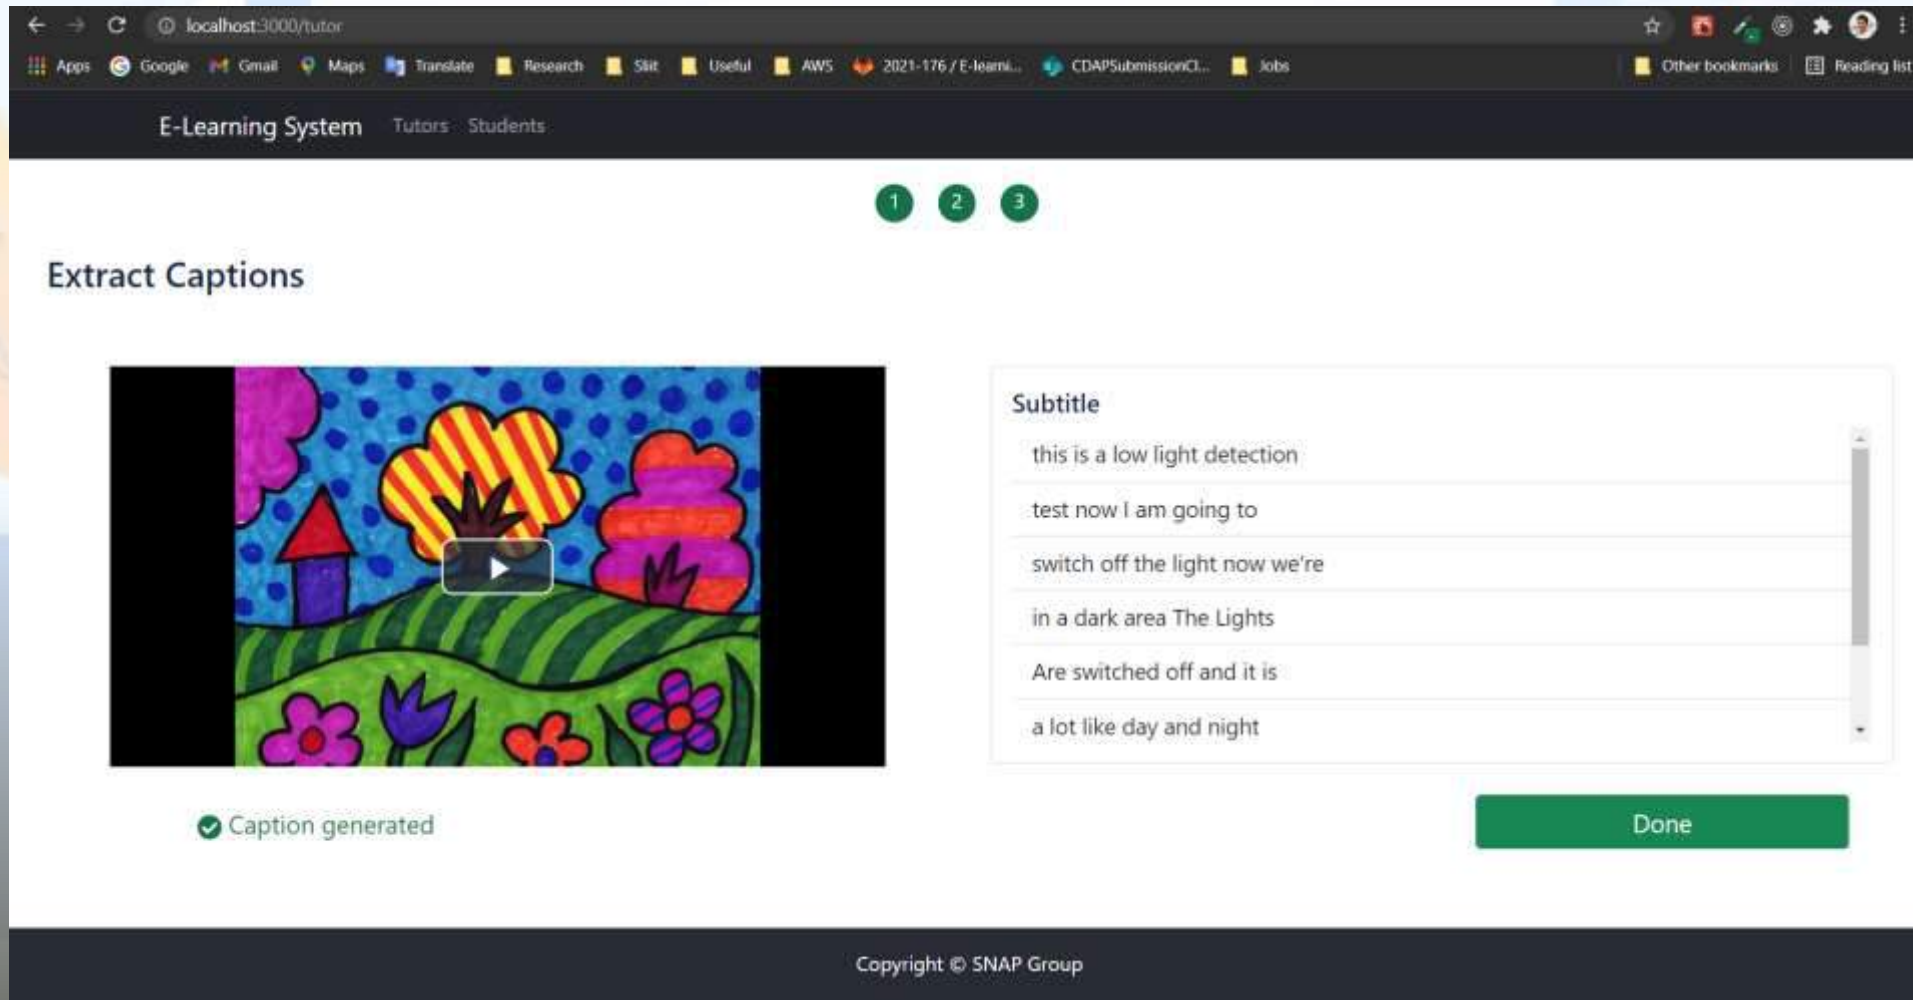

Video Preview: A pop-art style landscape with a house, trees, and flowers. A play button is overlaid on the video.

Status: Processed

Next Step: NEXT

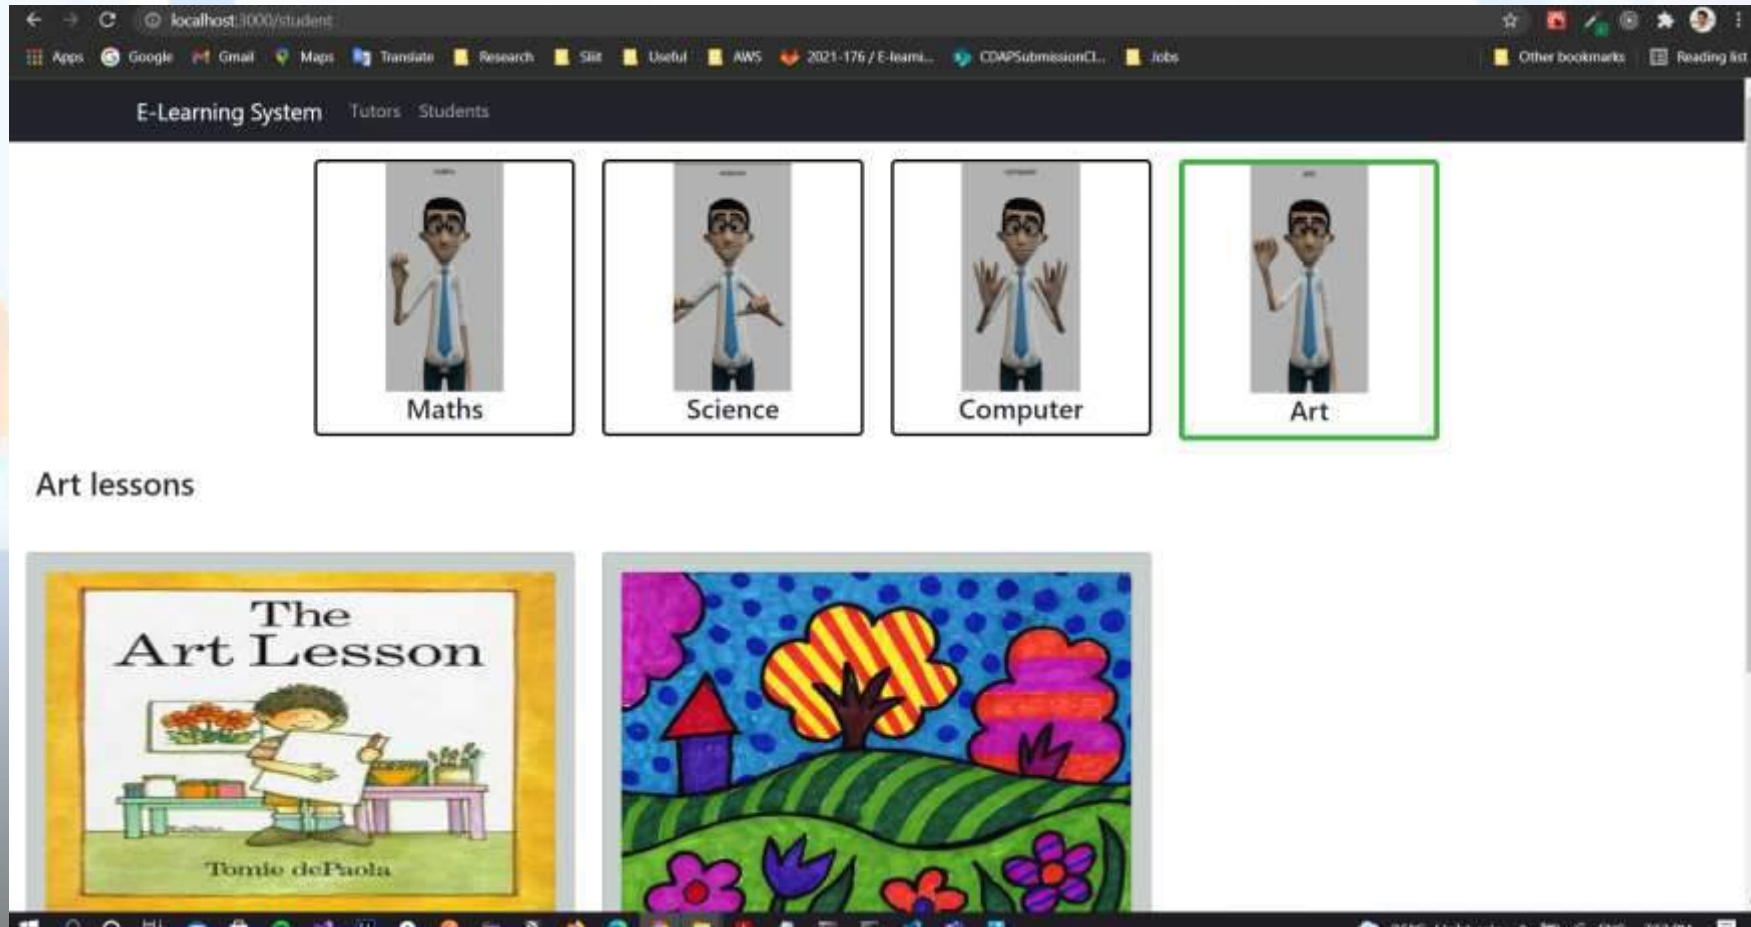

Enhanced percentage: 38.18%

Completion of Project

The screenshot shows a web browser window with the address bar at localhost:3000/tutor. The page title is 'E-Learning System' with links for 'Tutors' and 'Students'. There are three green circular progress indicators (1, 2, 3) at the top. The main heading is 'Extract Captions'. On the left is a video player showing a colorful, stylized landscape with a house, trees, and flowers. Below the video is a green checkmark and the text 'Caption generated'. On the right is a 'Subtitle' section with a text area containing the following text: 'this is a low light detection', 'test now I am going to', 'switch off the light now we're', 'in a dark area The Lights', 'Are switched off and it is', 'a lot like day and night'. A green 'Done' button is at the bottom right. The footer of the page reads 'Copyright © SNAP Group'.

Completion of Project

Completion of Project

Failed Attempts

- **Enhancing low light images using histogram equalization produces high noise in the image.**
- **Using gamma correction for videos in HSV format destroyed the low light parts of the video.**

Achievement

Completion

- Low light identification and enhancement algorithm
- Captioning Algorithm
- Backend
- Fronted

On going

- Fine tuning User interfaces

Data Science**

Functionality – Converting Text to Sign language

Research

- **Understanding the study content through the usual lecture videos in the LMS is difficult for the hearing-impaired students.**
- **Therefore, it is required that an automated mechanism for translation to sign language is developed.**
- **The module for translation will help hearing disabled people to understand in an efficient and easy way by providing them with a video to convey them the message of text.**

Research Gap

System	Reliable translation of words	Sign Language translation in E-Learning platform
M. S. Nair, N. A. P and S. M. Idicula	X	X
System proposed A.S. Drigas, D. Kouremenos, S. Kouremenos and J. Vrettaros	X	X
Our System	✓	✓

Objective

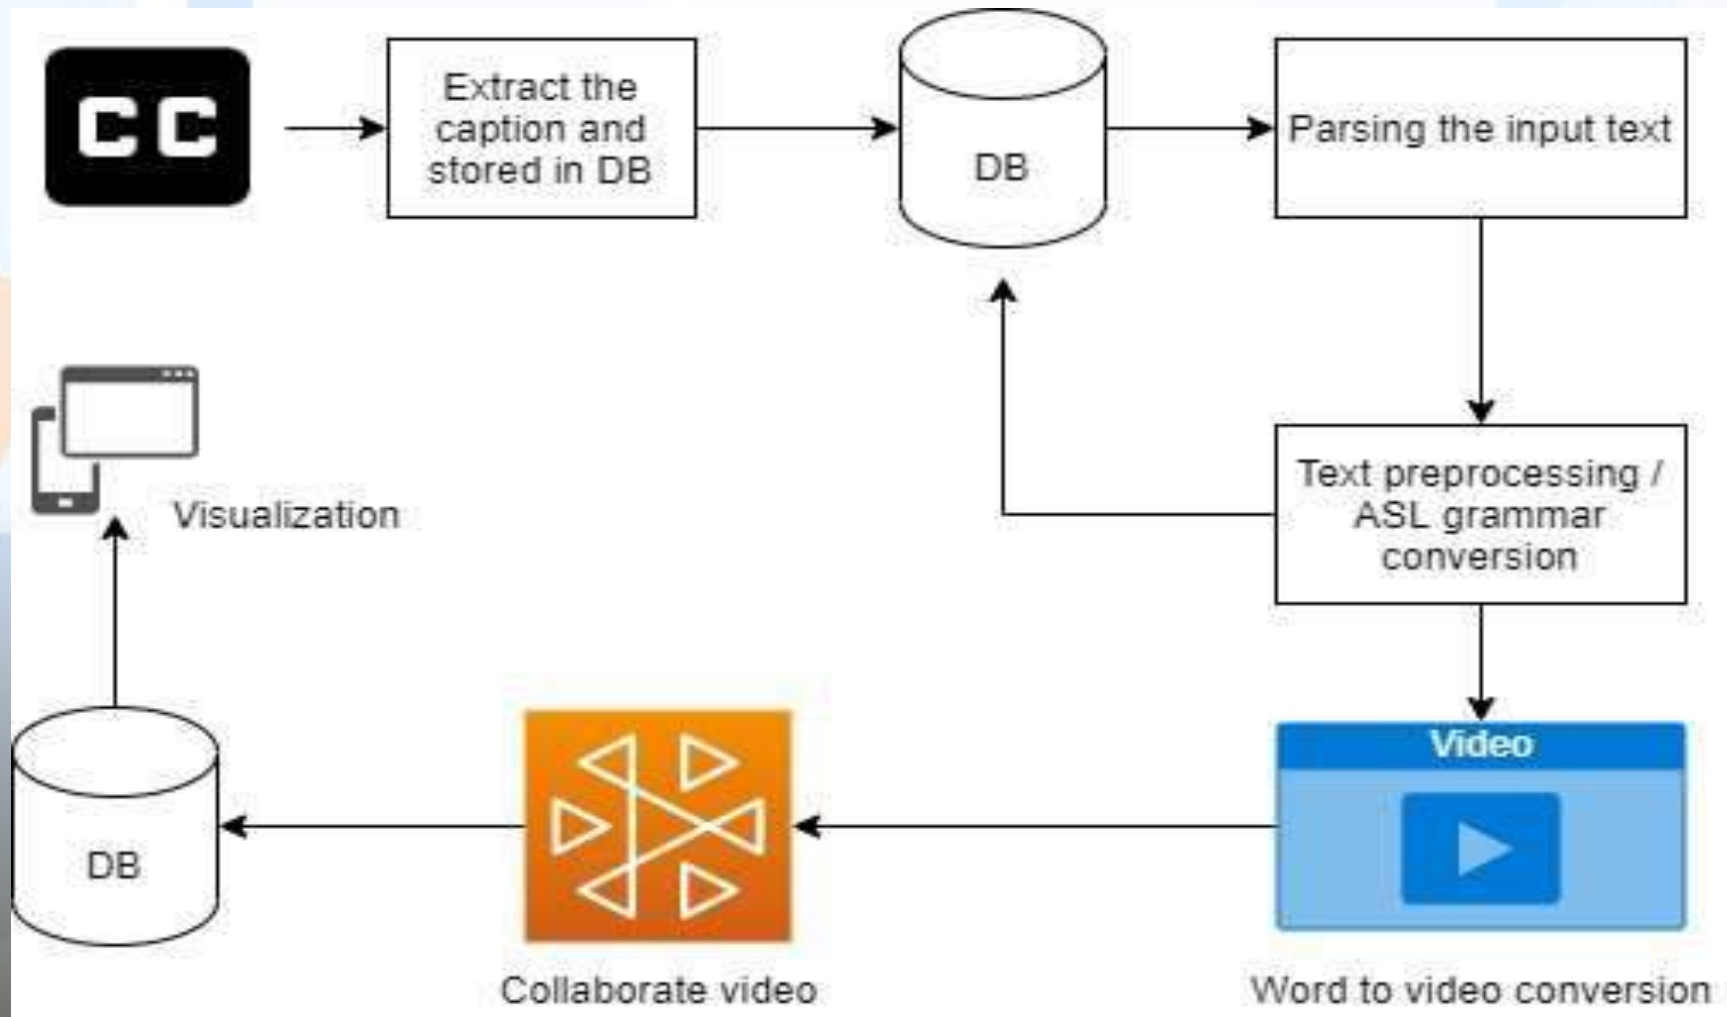

Main Objective

- **Converting lecture videos into sign language through the video captions (text) using Natural Language Processing technique.**

Sub Objective

- **Perform a complete analysis of the most used sign language which will be helpful to implement in the system.**
- **Design a user-friendly system to improve user interaction and user experience.**
- **Build a reliable translator within the system to ensure correct conveyance of the study material.**

Function Overview

Methodology

1. I used MS-ASL to download the video clips of each and every word.
2. Converting English grammar into American sign language grammar
 - A parser will be used to parse the English text.
 - The sentences will be reordered based on the ASL grammar rules.
 - An eliminator will be used for stop words removal.
 - Stemming will be done for getting the root words and replacing the synonyms.
3. Video conversion will be done.

Methodology

➤ Video conversion

In this final step, the ASL transformed text will be made to find matches from the downloaded video data set available for each word, using its label.

Then, a set of videos will be displayed as a sequence on the screen, representing the captions of the lecture video.

Test Results

```
inputString = ""

java_path = "C:\\Program Files\\Java\\jdk-13.0.1\\bin\\java.exe"
os.environ['JAVAHOME'] = java_path

for each in range(1, len(sys.argv)):
    inputString += sys.argv[each]
    inputString += " "

# inputString = raw_input("Enter the String to convert to ISL: ")
inputString = "I am going to School to do my Presentation tomorrow."

# D:\accash\stanford-postagger-full-2015-12-09\models
parser = StanfordParser(
    model_path='D:/accash/stanford-parser-full-2015-12-09/edu/stanford/nlp/models/lexparser/englishPCFG.ser.gz')

o = parser.parse(inputString.split())

englishtree = [tree for tree in parser.parse(inputString.split())]
parsetree = englishtree[0]

dict = {}

Software Engineering**

Functionality – Converting Sign language into text

Introduction

- **Hearing-impaired students want to communicate with others.**
- **Hearing-impaired can ask a question and clarify with the tutor.**
- **Deaf and dumb students can overcome their education issues and, all students encourage to follow their education.**

Is it useful if the hearing-impaired students can clear their doubts using sign language?

68 responses

Research Gap & Problem

- **Students who are deaf and dumb have not yet fully utilized ways to voice their doubts.**
- **Two-way communication is not yet in use in e-learning platform.**

Paper	Tasks	Limitation	Our system
[1]	Using Two-way hand gesture	Developed but Not accuracy	Yes Accuracy level High
[2]	Sign language gestures detect word	Only detect Letters and Numbers	Yes Detect word and letters also
[3]	Make Two way communication	Developed but Cannot used in e-Learning Platform	Yes We using two way communication
[4]	Easy to use	Only using glove can detect sign language	Yes Without glove using video only

Research Gap & Problem

- **A tutor cannot understand sign language.**
- **Deaf and dumb student only way to communicate with ordinary people through sign language.**
- **Each country has unique sign languages.**

Objective

Main Objective

- **Recognize sign language and convert it into Text.**

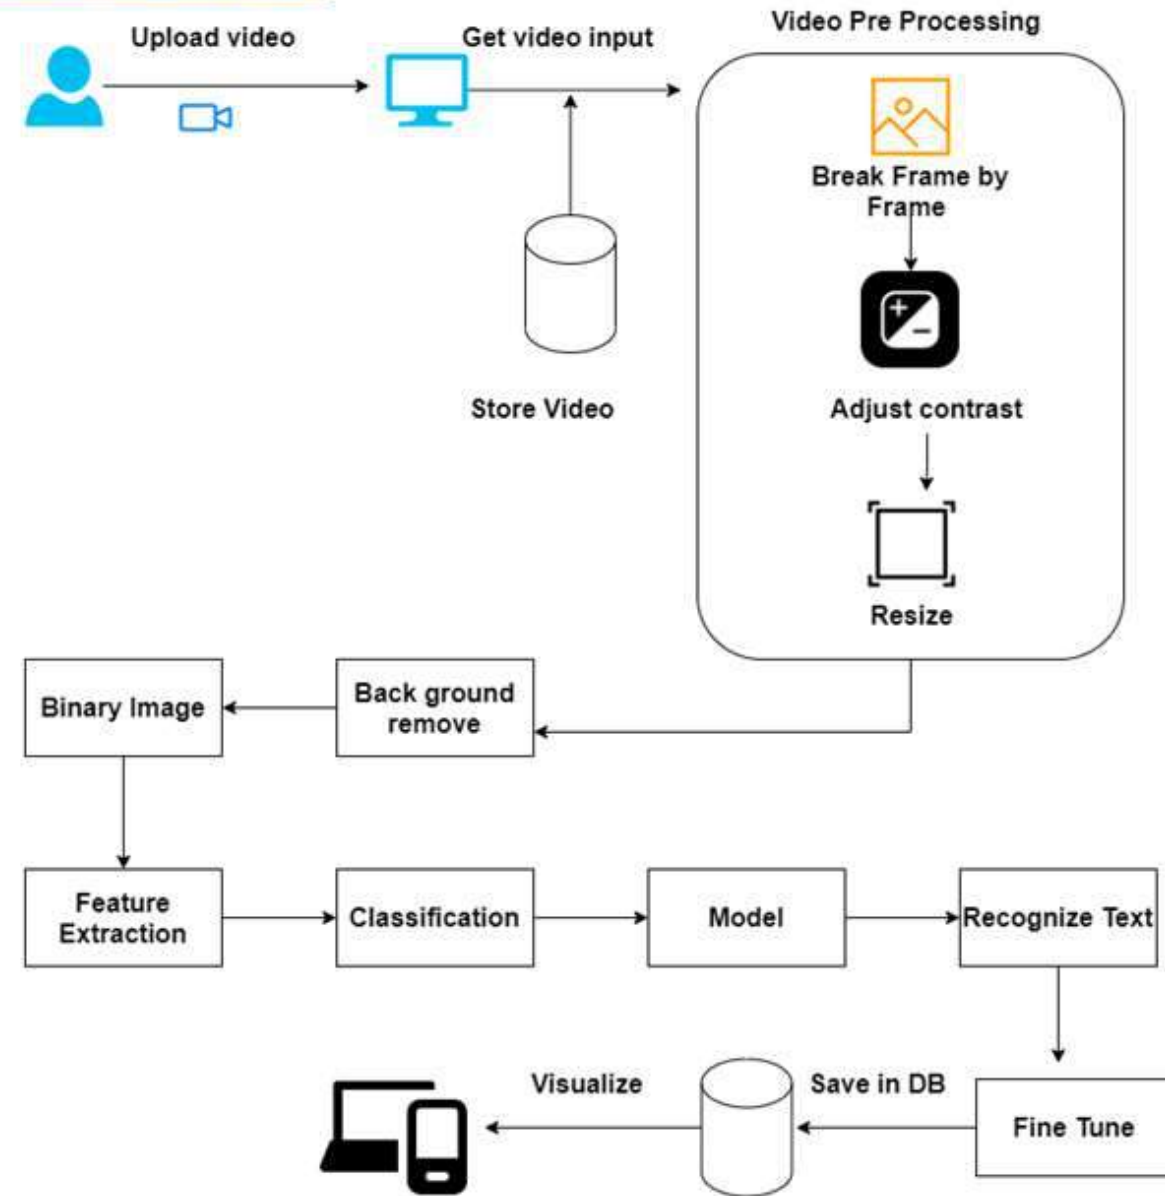

Sub Objective

- **Do the preprocessing video and get frame by frame.**
- **Removal of background and objects**
- **Convert Image in binary form.**
- **Feature Extraction**
- **Recognize text and fine tune to native language.**

Function Overview

Functionality overview diagram

Methodology

- **Taking input video and do the video pre-processing.**
- **In the pre-processing video convert into frame by frame Adjust contrast ,Image resize**
- **Image background and object removal**
- **Image into binary form**
- **Feature Extraction - Histogram of oriented gradients**
- **Classification - Stochastic Gradient Descent**
- **Training ML model data set from own dataset**
- **Recognize gestures text**
- **Fine tune the text to native language**

Project Requirements

Functional requirements

- Converting sign language into text and fine-tune.

Non-Functional requirements

- Less manual work to translate sign language.
- Take less time to convert the sign language into text.
- Accurate recognition.

Technology & Tool Selection

Technologies

- **Flask**
- **React js**

Tools

- **For Video Processing– OpenCV**
- **For version controlling – GitLab**
- **Project Management – MS Planner**

Research Gap & Problem

Research Problem

- **There is no LMS on teaching sign language.**
- **The sign language tutors are lack of knowledge in teaching online platform.**
- **Lack of dataset for sign language.**
- **Collecting a considerable amount of dataset takes time.**

Research Gap & Problem

Research Gap

- **Algorithms used in hand gesture detection has limitations.**
- **Mostly research are done on hand gesture in image dataset.**
- **Increase the high mean accuracy in detection.**

<i>Features</i>	<i>Finger-Earth Mover's Distance [2]</i>	<i>Superpixel-Based Hand Gesture Recognition [2]</i>	<i>Recognizing Chinese Sign Language Based on Deep Neural Network[1]</i>	<i>Our Solution</i>
Achieve accuracy in detection	✓	✓	✓	✓
Fast recognition speed in analyzing	X	X	X	✓
Achieve high mean accuracy in detection	X	X	✓	✓

Objective

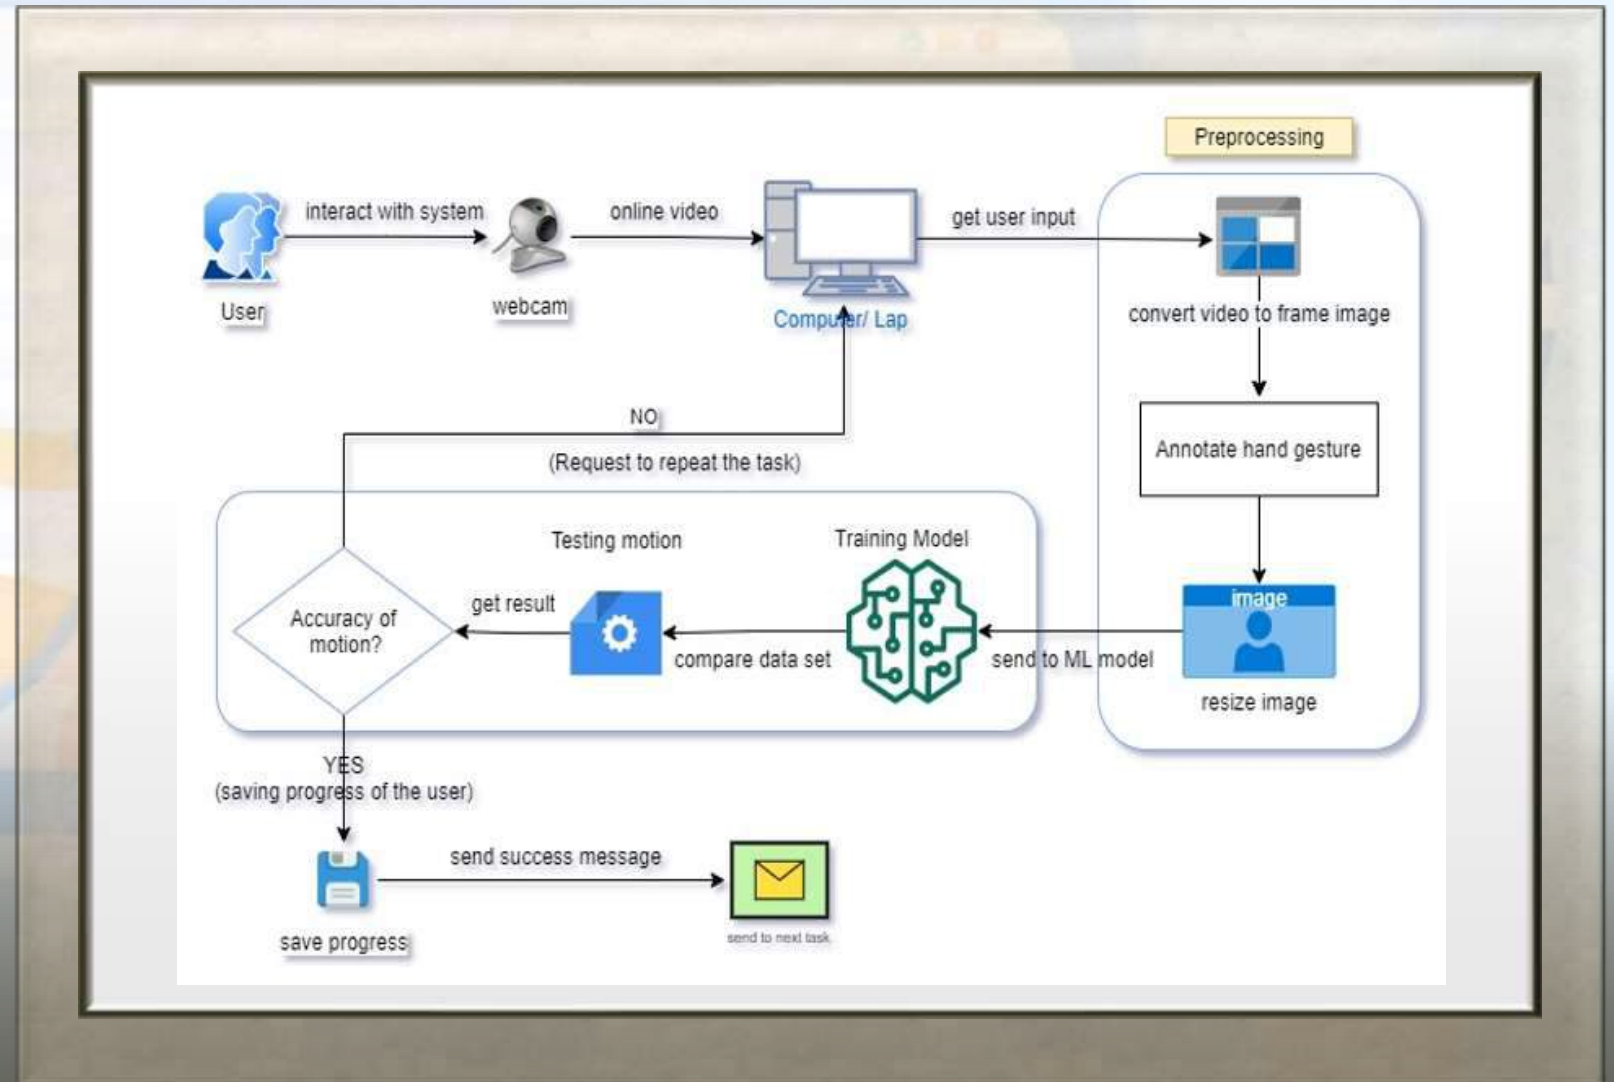

Main Objective

- **Detecting the user's motion and analyses motion whether it is similar with the system.**

Sub Objective

- **Feeding the system with tutorial of the module(dataset).**
- **Providing correct instruction to user and to follow.**
- **Getting optimized video from the user(800x600pixel).**
- **Detect the user's motion using TensorFlow.**
- **Analyze whether the dataset is accurate by CNN.**

Function Overview

Methodology

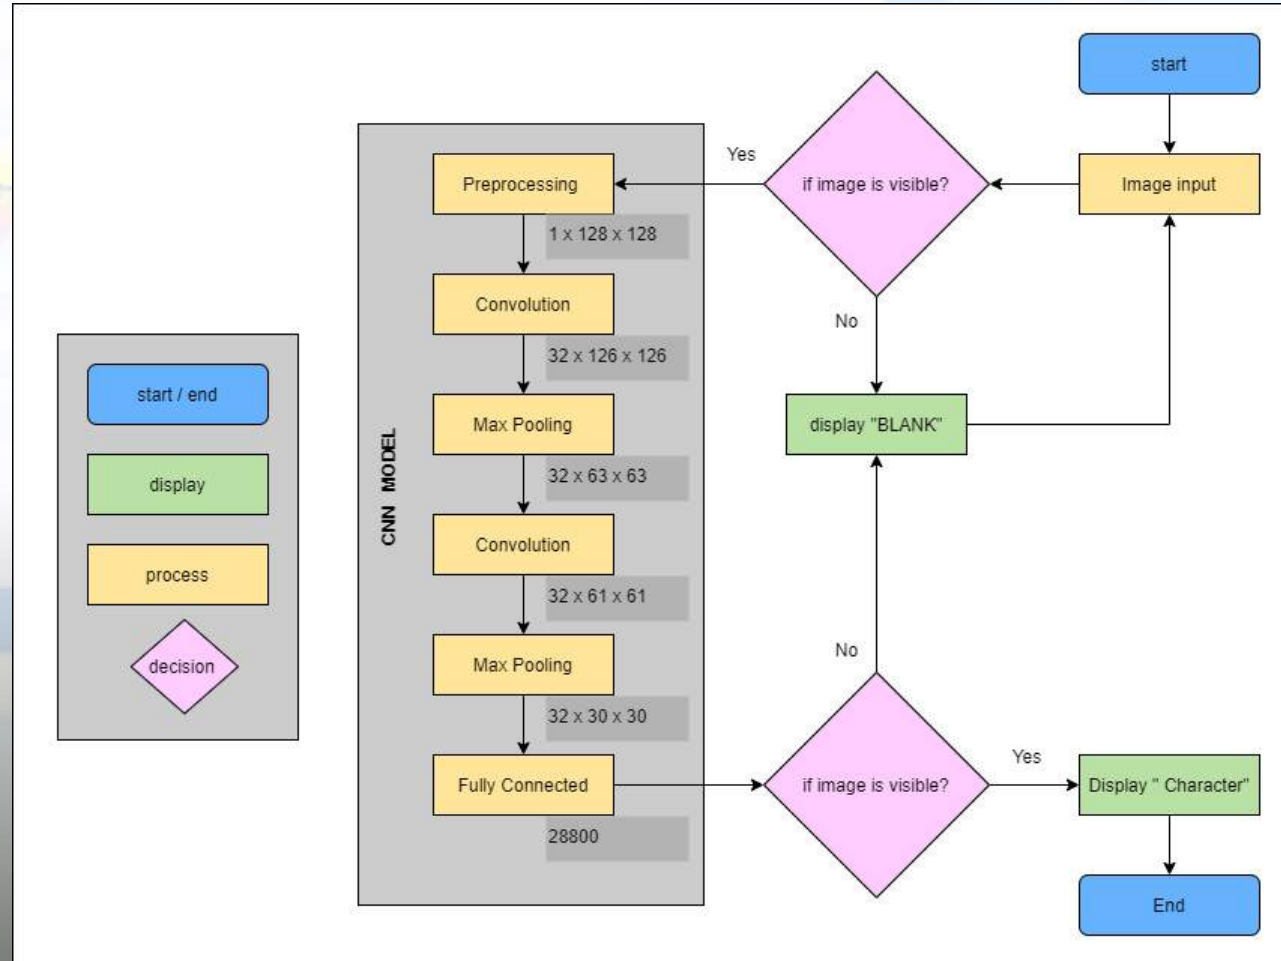

Image Classification

- **Implement ML model with Convolutional Neural Networks(CNN).**
- **Using 'Keras' library to build a CNN model.**
- **Dataset alphabet of American sign language.**
- **Minimum 100-200 images per class to train.**
- **Image going through different stage in CNN classifier**
 - 1) Convolutional Layer
 - 2) Pooling Layer 1
 - 3) Convolutional Layer
 - 4) Pooling Layer 2

Methodology

CNN Model

- Model trained with alphabet and digits
- Test with random sign in low light environment with webcam(USB2.0 VGA UVC)

Methodology

Hand Gesture

Threshold

CNN

Identified Symbol

Methodology

Analysis Object

Image Classifier

- Gaussian
- Rectified Linear Unit
- Max Pooling Layer
- Dropout Layers

Project Requirements

Functional Requirements

- Analyze user hand gestures effectively and correctly.
- Analyze user knowledge on learning.

Non-Functional Requirements

- Giving accurate result of user's hand gestures without further ado
- High mean accuracy of detection and analyze motion

User Requirements

- Personal computer / Laptop
- Webcam
- Internet connection

Technology & Tool Selection

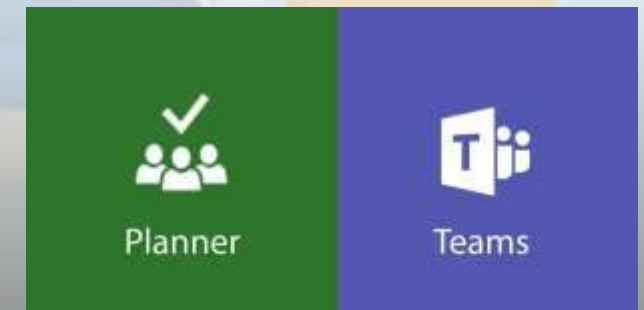

Technologies

- **Preprocessing**
- **Image Classifier**

Tools

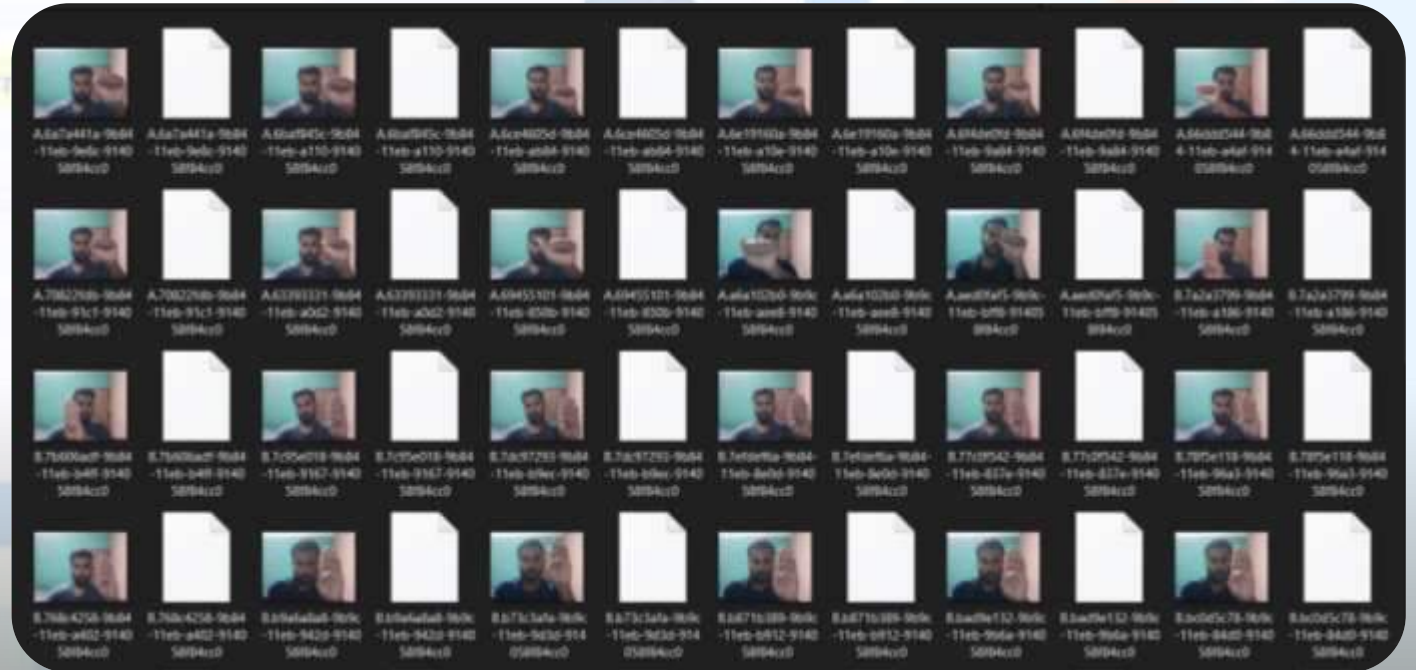

- **Preprocessing– OpenCV, Gaussian filter**
- **Image Classifier – CNN, Keras, TensorFlow**
- **For version controlling – GitLab**
- **Project Management – MS Planner**

Completion of Project

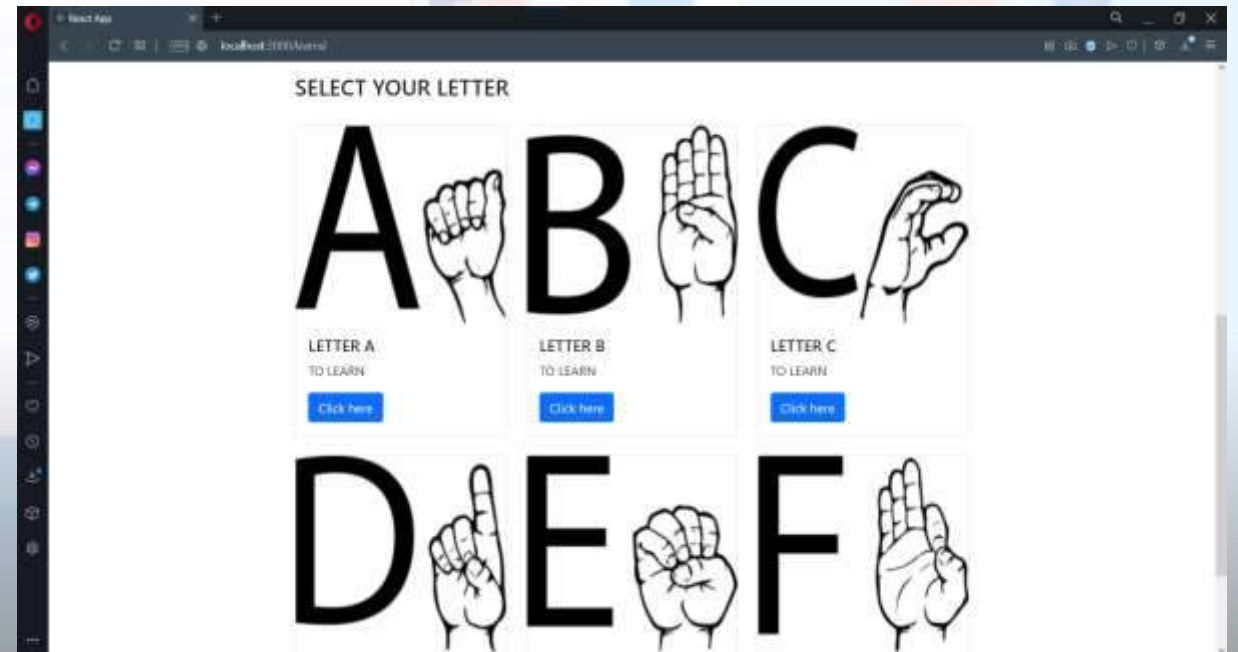

Failed Attempts

- **Build model using TensorFlow tf2_detection_zoo, and train model with own dataset.**

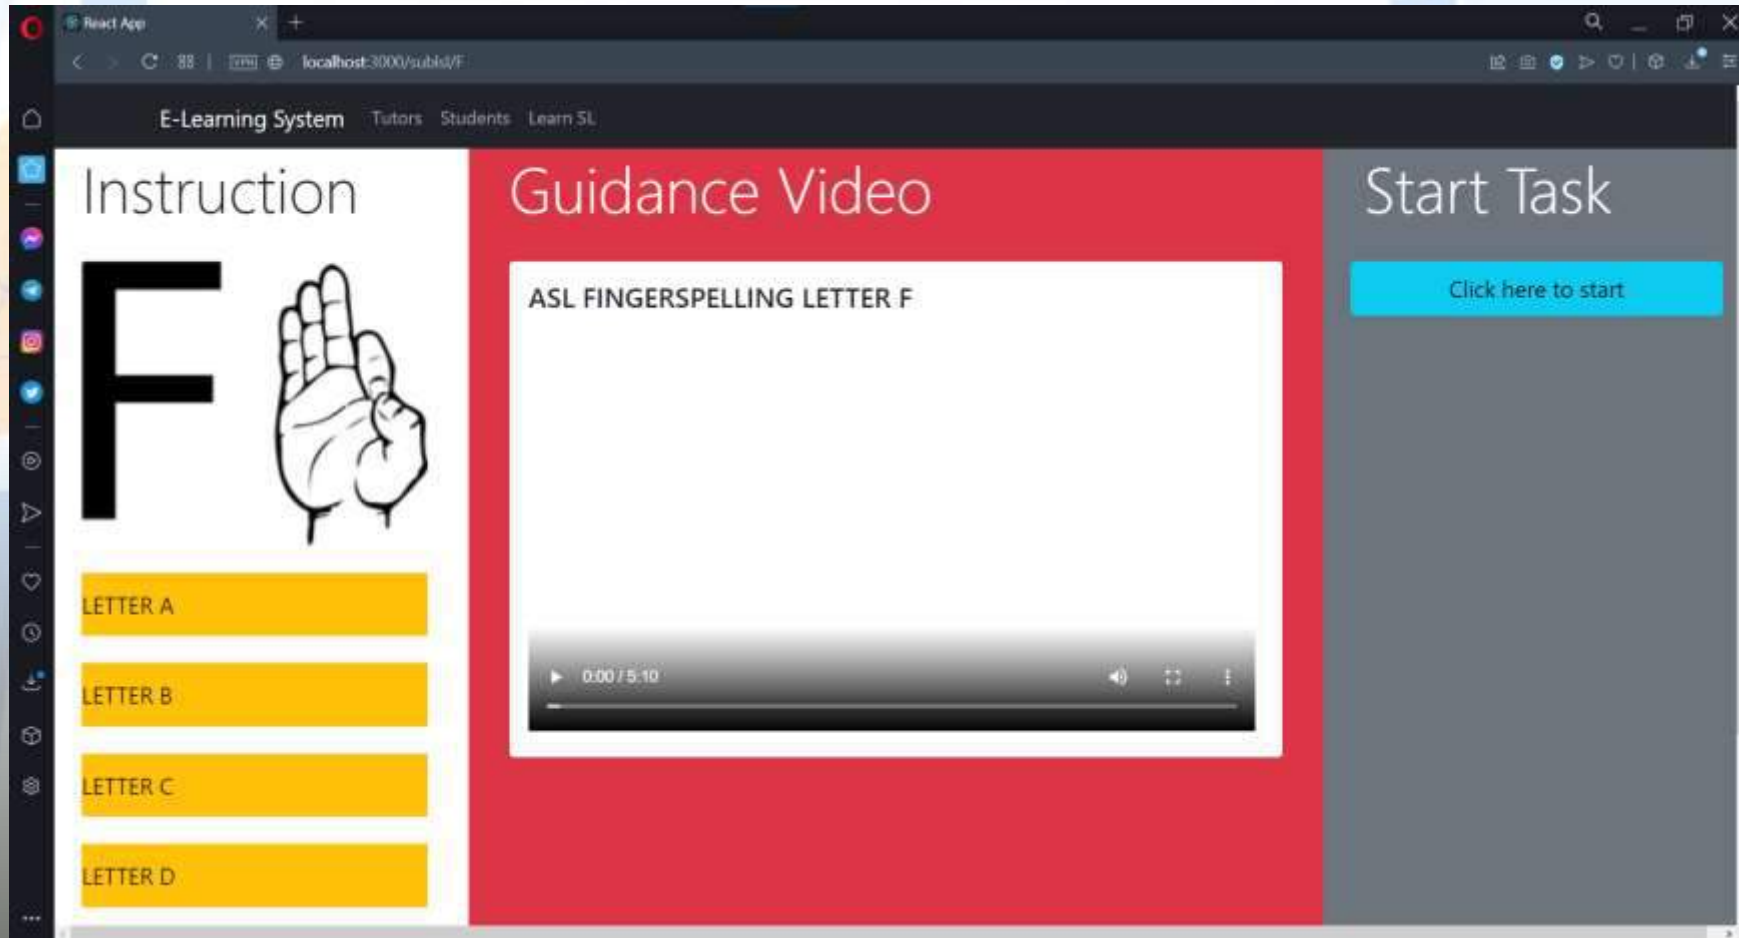

Completion of Project

Final report											Completed	To be complete	To be complete
Final Evaluation													To be complete

 Completed

 To be complete

FUNCTION WORK BREAK DOWN

Achievement

Completion

- Detect images in real-time
- Identify hands gestures
- UI Designing

On going

- More testing and Bug Fixing!!
